This ER diagram concerns itself with student tests (admins) for classes of student at various schools. It has six entities: student, teachers, schools, admins (tests), questions and answers.

There are four relations:
1) classes which are related to schools, teacher and admins.
2) students2classes which are classes related to students (thus the relation to a relation).
3) questions2amins which defines what questions make up an admin (test).
4) answers_given which relates a student to their answers for an admin.
